

PredictNow.ai

OVERVIEW & FEATURES

WHAT IS PREDICTNOW.AI?

PredictNow.ai is a financial machine learning Saas. We use the trader's past track record, augmented with big data, to compute the probability of profit for their current position or next trade. This software can also identify and rank the important predictors (whether technical, fundamental, or macro-economic) that affect this probability. Our technology is unique and patent-pending, and is accessible via a no-code interface, or a REST/Python API. We have successfully applied it to our own Tail Reaper strategy which has recently reduced the drawdown of our strategy by more than 20%.

HOW DOES IT WORK?

Users train a machine learning model based on their historical results, where they receive predictive performance results for both the in-sample and out-of-sample datasets. This trained model is then downloaded into a compressed file that is used in the Live section. From there, users upload the model file along with the data features for that day into the PredictNow.ai software. The software then utilizes the previously trained model to provide a prediction for the daily dataset. It can also provide access to a Rest API, allowing the user to add PredictNow.ai as part of their trading process. Our premium service gives each user access to world-class consultants who will help improve the data included in their models, constantly increasing the predictive power of your model. Each Premium user is provided 5 hours of expert-level consulting per month.

WHAT PREDICTNOW.AI DOES FOR YOU

The PredictNow.ai platform utilizes machine learning to empower your specific trading strategy, computing live probability predictions to inform your investment decisions and adding an additional risk management layer to your portfolio. Traders can make both regression and classification predictions for their strategy, depending on their preference. The PredictNow.ai service can also provide valuable insights about your trading strategy that would normally not be identified by a human with our feature selection methods. Because the platform predicts the probability of profitability of your specific strategy, not overall market performance, there is no conflict of interest or arbitrage risk among our clients.

PredictNow.ai keeps all our client's files confidential and anonymized, to protect their intellectual property. Finally, our free trial offer allows traders to test the service out for a month without any financial commitment.

PredictNow.ai

PLANS & PRICING

BASIC VS PREMIUM SUBSCRIPTION

We have two different product offerings: Basic and Premium subscriptions. We offer prospective clients a free month of service to experiment with the Basic subscription, where they have access to a 4-hour course that overviews financial machine learning. We offer trial users a complimentary 30-min consultation call to help answer specific questions they may have. Clients begin getting charged after the first month to use the service and are limited to 400 MB of storage and 5 hours of CPU usage a month. Our Premium service provides access to a rest API and allows for unlimited usage. The Premium plan is aimed at onboarding traders to the service with minimal data science experience by providing 5 hours of feature engineering consultation with the PredictNow.ai team.

	1-MONTH TRIAL FREE	BASIC SUBSCRIPTION \$100/MONTH	PREMIUM SUBSCRIPTION \$1500/MONTH
No Code Access	X	X	X
Hands-On Support Team	X	X	X
Pre-engineered Features	X	X	X
Professional Consulting			X
Unlimited Storage & CPU Usage			X
API Access			X

01 Intro Call

An introduction call is conducted between the prospective client and PredictNow.ai.

02 Mutual NDA

A Mutual NDA is signed by both parties and API trial files are shared with clients by PredictNow.ai.

03 API Trial

Client uses the API trial to test our feature sets with their strategies or portfolios to generate an initial ML model and performance metrics.

04 Consult

A follow up call is scheduled and conducted, where PredictNow.ai helps evaluate the initial results and provides suggestions to improve the client's performance.

05 Refine

Client implements the improvements and continues testing their model.

06 Contract

At the end of 30 days, the user either suspends the free trial or signs a premium contract, depending on the performance of their model.
